We don't want this :

(In mobile development)

"Hey, why is my app so laggy?"

"The fetching of my data takes ages"

"Asynchronicity is so hard to implement"

" ... "

UI Thread.

It's the main thread of the app. It's responsible of :

- ❑ Drawing the UI
- ❑ Providing the resources necessary to the app's execution
- ❑ Creating the components such as activities, fragments etc

Resource
providing

Component
destruction

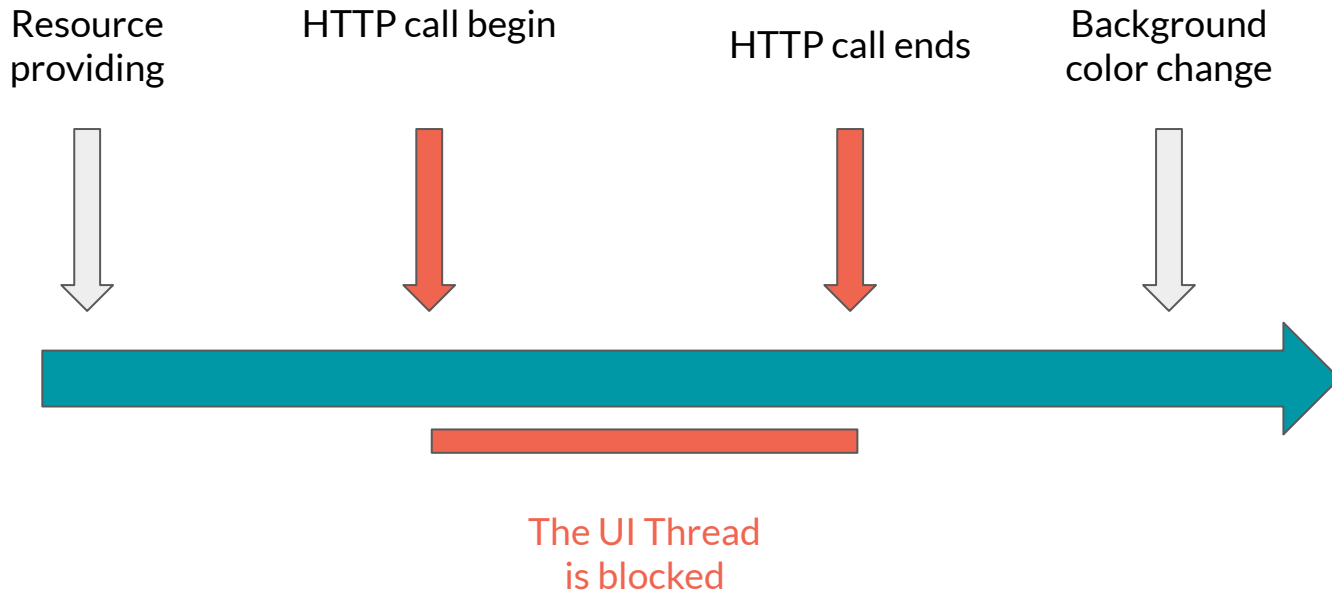

Background
color change

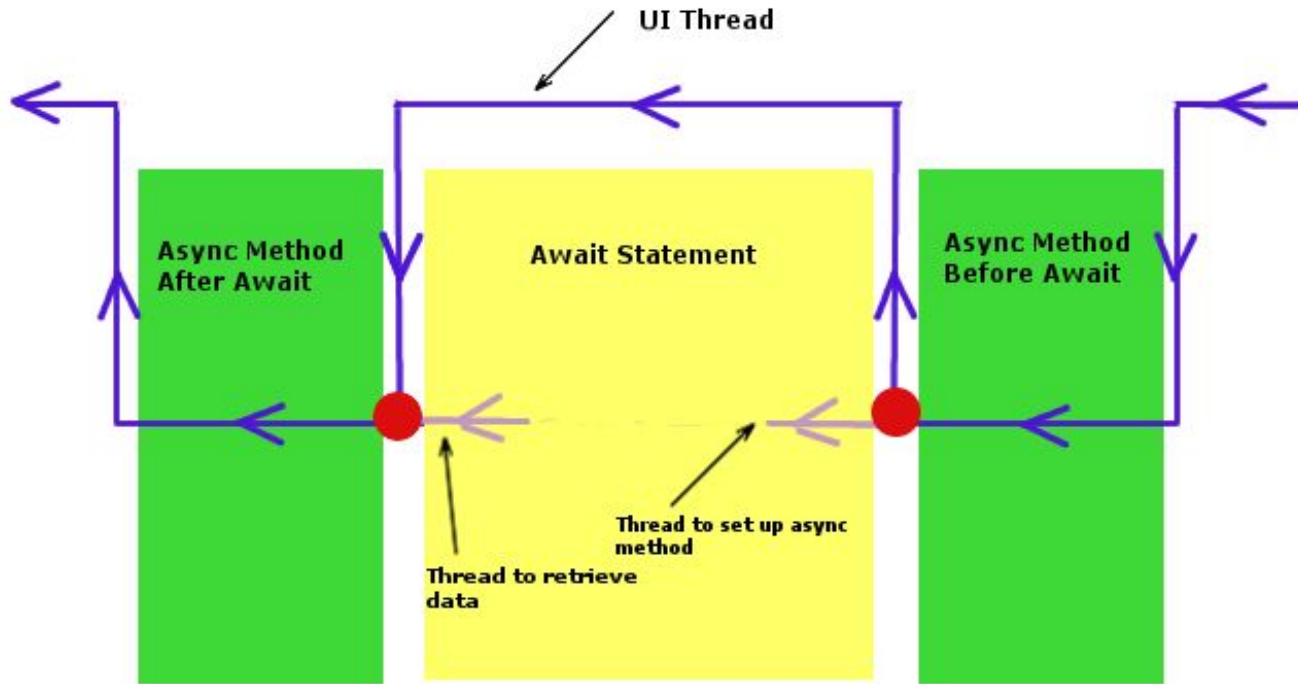

Synchronous calls issues.

Async / Await.

Book de stages.
